

PROFESSIONAL SUMMARY :

- Senior Software Engineer with 7+ years of experience designing and delivering scalable enterprise applications using **Java** and the **Spring ecosystem**, building resilient systems across banking, retail/manufacturing, healthcare, and consulting domains.
- Strong backend engineering expertise leveraging **Spring Boot**, **Spring MVC**, **Spring Security (RBAC/OAuth2)**, **Spring Data JPA**, to implement secure, maintainable, and transactionally consistent enterprise services.
- Proven experience building modern full-stack applications using **React**, **Angular**, **TypeScript**, and **JavaScript (ES6+)**, developing modular frontend architectures integrated with secure **RESTful** and **GraphQL APIs**.
- Extensive experience designing distributed systems using **Microservices Architecture** and monolithic patterns where appropriate, applying **Resilience4j Circuit Breaker** strategies to ensure fault tolerance and high availability.
- Hands-on multi-cloud expertise across **AWS**, **Microsoft Azure**, and **Google Cloud Platform**, deploying cloud-native workloads using **EC2**, **AKS**, **GKE**, **App Service**, and managed database services.
- Strong data engineering exposure managing transactional and analytical platforms including **PostgreSQL**, **MySQL**, **Azure Cosmos DB**, **Google Big Query**, and **Azure Synapse Analytics**, supporting both operational and reporting workloads.
- Experienced in containerization and orchestration using **Docker** and **Kubernetes (GKE, AKS)**, enabling scalable deployments and consistent runtime environments across cloud platforms.
- Demonstrated CI/CD and DevOps discipline using **Maven**, **GitHub Actions**, **Azure DevOps Pipelines**, and Git-based workflows to standardize builds, automate testing, and streamline controlled releases.
- Committed to quality and reliability through comprehensive testing using **JUnit**, **Mockito**, **Spring Boot Test**, **Jest**, **Jasmine**, and **Test Containers**, complemented by centralized logging and monitoring via **Log4j**, **CloudWatch**, **Azure Monitor**, and **GCP Monitoring**.
- Collaborative Agile practitioner working within **Agile/Scrum frameworks**, leveraging **JIRA**, **Confluence**, and **Azure Boards** to deliver secure, scalable, and continuously evolving enterprise solutions.

TECHNICAL SKILLS :

Frontend Development

React (Functional Components, Hooks, Redux, React Router), Angular (Modules, Components, Services, RxJS, Angular Router), AngularJS, TypeScript, JavaScript (ES6+)

Backend & Spring Ecosystem

Java , Spring Framework, Spring Boot, Spring MVC, Spring Security (RBAC, OAuth2), Spring Data JPA (Hibernate), Spring JDBC, Spring AOP

Architecture & API Design

Microservices Architecture, Monolithic Architecture, RESTful APIs, GraphQL, OpenAPI (Swagger), Resilience4j (Circuit Breaker, Retry, Bulkhead), Controller–Service–Repository Pattern

Databases & Data Platforms

PostgreSQL (AWS RDS, Azure Database), MySQL, Azure Cosmos DB, Cloud SQL (GCP), Google BigQuery, Azure

Cloud Platforms	Synapse Analytics AWS (EC2, RDS, IAM, CloudWatch), Microsoft Azure (Virtual Machines, App Service, AKS, Azure DevOps, Azure Monitor, Application Insights), Google Cloud Platform (Compute Engine, GKE, Cloud SQL, Big Query, Cloud Monitoring, Cloud Logging, Cloud Trace)
DevOps & Containerization	Docker, Kubernetes (GKE, AKS), Maven, GitHub Actions, Azure DevOps Pipelines
Testing & Quality Engineering	JUnit, JUnit 5, Mockito, Spring Boot Test, Spring Test, Test Containers, Jest, React Testing Library, Jasmine, Karma
Monitoring & Logging	Log4j, AWS CloudWatch, Azure Monitor, Application Insights, GCP Cloud Monitoring, Cloud Logging, Cloud Trace
Tools & Methodologies	Git, Azure Repos, Linux, Agile, Scrum, JIRA, Confluence, Azure Boards

PROFESSIONAL EXPERIENCE

Truist Bank

Senior Software Engineer

Feb 2024 – Present

Project Description:

Established a dependable enterprise solution by formalizing how systems, data flows, and operational rules interacted across large-scale business environments. Consolidated fragmented workflows into controlled execution paths. Defined accountability and decision authority across teams. Sustained consistent outcomes through structured validation, disciplined change practices, and continuous oversight supporting stability, clarity, and long-term continuity.

Roles and Responsibilities:

- Designed and delivered an enterprise-scale, cloud-native banking platform using **Microservices Architecture** with **Spring Boot** services, deployed on **Google Cloud Platform** to enable secure, scalable, and governed interactions across distributed banking systems in regulated production environments.
- Designed reusable UI modules using **React Functional Components**, replacing legacy class-based implementations to promote modular architecture, improved readability, simplified unit testing, and scalable component-driven development across enterprise banking interfaces.
- Implemented component state and lifecycle management using **React Hooks** to control asynchronous API calls, dynamic UI updates, and controlled rendering flows across high-volume transactional workflows.
- Leveraged performance optimization hooks including **useMemo** and **useCallback**, reducing unnecessary re-renders and improving responsiveness of data-intensive dashboards handling large financial datasets.
- Developed reusable business logic through **Custom React Hooks**, encapsulating authentication handling, API integration logic, and validation workflows to enforce separation of concerns and eliminate code duplication across distributed UI modules.
- Implemented secure client-side navigation using **React Router nested routes, dynamic routing, protected routes**, enabling role-based access control and secure multi-step transactional journeys within regulated banking applications.
- Integrated **TypeScript** with **React**, enforcing strict typing for component props, state models, and API contracts, improving compile-time validation and reducing runtime defects across large-scale frontend systems.
- Managed centralized state architecture using **Redux**, implementing reducers and middleware to coordinate predictable data flow and synchronize complex UI interactions across distributed micro-frontend components.
- Built responsive client-side functionality using **JavaScript (ES6+)**, applying **async/await** patterns and modular scripting to ensure seamless integration with backend **REST APIs** and **GraphQL APIs**.

- Designed and implemented versioned **RESTful APIs** using **Spring MVC and Spring Boot**, enforcing standardized controller patterns, DTO validation, and global exception handling to ensure consistent service contracts across microservices.
- Developed client-driven data retrieval using **GraphQL schema definitions and resolvers**, reducing over-fetching and improving efficiency for composite UI views across service boundaries.
- Architected backend services using **Java 17** with layered **Controller–Service–Repository** design and **Spring Dependency Injection**, ensuring modularity, maintainability, and clean separation of business logic.
- Implemented core business orchestration within the **Spring Services layer**, defining transactional boundaries and reusable domain logic for compliance-sensitive banking workflows.
- Secured APIs using **Spring Security with Role-Based Access Control (RBAC)**, integrating authentication and authorization controls aligned with enterprise governance standards to protect banking resources.
- Implemented persistence using **Spring Data JPA Hibernate** with optimized entity relationships and transactional management to support reliable processing of mission-critical financial operations.
- Managed primary transactional databases using **Cloud SQL (PostgreSQL – GCP)**, ensuring ACID compliance, automated backups, indexing strategies, and operational stability aligned to regulatory expectations.
- Designed and integrated enterprise reporting pipelines feeding curated transactional datasets into **Google Big Query Data Warehouse**, enabling large-scale analytical processing, regulatory reporting, compliance audits, and business intelligence dashboards while isolating analytics from core banking systems.
- Containerized applications using **Docker** and orchestrated deployments on **Google Kubernetes Engine (GKE)**, enabling rolling updates, scalable pod management, and consistent runtime environments.
- Implemented resilience patterns using **Resilience4j Circuit Breaker, Retry, and Bulkhead mechanisms**, preventing cascading failures and ensuring controlled degradation during downstream service instability across distributed microservices.
- Automated CI/CD pipelines using **Maven, GitHub Actions, and Git**, standardizing build validation, automated testing, artifact management, and multi-environment deployments within GCP environments.
- Developed backend testing using **JUnit 5, Spring Boot Test, and Mockito**, validating service-layer logic, API contracts, and transaction flows prior to production release.
- Implemented frontend testing using **Jest and React Testing Library**, validating hooks execution, component rendering, async behavior, and integration consistency between frontend and backend systems.
- Implemented centralized observability using **GCP Cloud Monitoring, Cloud Logging, and Cloud Trace**, enabling real-time performance tracking, structured log analysis, and distributed tracing.
- Managed structured logging using **Log4j**, ensuring traceability and correlation IDs across distributed microservices.
- Collaborated within **Agile/Scrum frameworks** using **JIRA and Confluence**, participating in sprint planning, backlog refinement, peer reviews, and secure release management for enterprise banking solutions.

Tech stack:

React Functional Components, Hooks, Custom Hooks, React Router, TypeScript, JavaScript (ES6+), Redux | Java 17 | Spring Core, Spring Boot, Spring MVC, Spring Security (RBAC), Spring Data JPA Hibernate, Spring AOP | Microservices Architecture, REST APIs, GraphQL, OpenAPI (Swagger) | Resilience4j (Circuit Breaker, Retry, Bulkhead) | Cloud SQL (PostgreSQL), Google BigQuery | Google Cloud Platform (Compute Engine, GKE, Cloud SQL, BigQuery, Cloud Monitoring, Cloud Logging, Cloud Trace) | Docker | Maven | GitHub Actions | Git | JUnit 5, Spring Boot Test, Mockito | Jest, React Testing Library | Log4j | Agile, Scrum, JIRA, Confluence

Behr Paint Company:

Senior Software Engineer

Jun 2020 – Nov 2023

Project Description:

Managed interconnected work activities by defining how tasks progressed across multiple teams and operational stages. Reduced friction caused by inconsistent execution approaches affecting daily delivery. Clarified coordination points, handoffs, and responsibility ownership. Improved execution flow through structured review cycles and incremental adjustments. Ensured consistent outcomes by maintaining steady alignment with evolving operational needs and delivery expectations.

Roles and Responsibilities:

- Engineered enterprise-grade business applications on **Microsoft Azure**, translating manufacturing and retail operational requirements into scalable microservices, enabling reliable execution of inventory management, order processing, and supply chain coordination across distributed operational systems.
- Designed end-to-end application workflows aligning production, warehouse, and retail data streams, implementing controlled service interactions and structured API communication to improve operational visibility and reduce data inconsistencies across interconnected enterprise platforms.
- Developed modular and component-driven user interfaces using **Angular Modules, Components, Services, Dependency Injection**, establishing reusable UI patterns and scalable frontend architecture to support enterprise operational dashboards and internal management portals.
- Implemented reactive programming models using **RxJS and Angular Reactive Forms**, managing asynchronous data flows, real-time updates, and complex validation logic to ensure responsive and reliable user interactions within operational systems.
- Configured secure and structured navigation using **Angular Router with Lazy Loading and Route Guards**, enforcing role-based access control and protecting sensitive manufacturing and retail workflows within internal enterprise applications.
- Applied strict typing using **TypeScript interfaces and models**, improving compile-time validation, enforcing consistent API contracts, and reducing runtime defects across large-scale frontend modules handling operational data.
- Built backend services using **Java 11** and layered **Controller–Service–Repository architecture**, structuring domain logic to ensure clean separation of concerns and maintainable business orchestration across manufacturing workflows.
- Implemented transactional orchestration within the **Spring Services layer**, coordinating multi-step order fulfillment and inventory update processes using **Transactional management**, ensuring atomicity and data consistency across distributed systems.
- Developed standardized **RESTful APIs using Spring Boot and Spring MVC**, implementing DTO validation, centralized exception handling, and structured response formats to enable reliable frontend-backend integration.
- Integrated secure authentication and authorization using **Spring Security with OAuth2 and RBAC**, enforcing access control policies aligned with organizational roles and securing sensitive operational endpoints.
- Applied **Spring AOP** to manage cross-cutting concerns such as logging, auditing, and performance monitoring, ensuring core business logic remained clean while improving traceability across enterprise services.
- Implemented data persistence using **Spring Data JPA Hibernate** with optimized entity mappings and query strategies, ensuring efficient data storage and retrieval for high-volume operational transactions.
- Utilized **Azure Database for PostgreSQL** to manage transactional workloads, configuring automated backups, indexing strategies, and high-availability settings to support consistent and reliable operational data storage.
- Leveraged **Azure Cosmos DB** to store semi-structured operational data, enabling schema flexibility and supporting evolving business requirements without disrupting core relational systems.
- Designed and integrated enterprise reporting pipelines feeding curated operational datasets into **Azure Synapse Analytics**, enabling large-scale analytical processing, supply chain performance reporting, and business intelligence dashboards while isolating analytical workloads from core transactional systems.
- Deployed applications on **Azure Virtual Machines and Azure App Service**, configuring scalable compute resources and environment-specific settings to handle fluctuating operational workloads.

- Containerized backend services using **Docker** and orchestrated deployments on **Azure Kubernetes Service (AKS)**, enabling rolling updates, scalable microservices management, and consistent runtime environments.
- Implemented automated CI/CD workflows using **Azure DevOps Pipelines and Maven**, streamlining build validation, test execution, artifact packaging, and controlled multi-environment deployments.
- Managed source code using **Git with Azure Repos**, enforcing structured branching strategies, peer review workflows, and controlled release management to maintain code quality.
- Developed backend unit tests using **JUnit 5 and Mockito**, validating service-layer logic, transactional workflows, and domain rules to reduce regressions during feature enhancements.
- Conducted integration testing using **Spring Boot Test and Test Containers**, verifying service interactions, database integrations, and API reliability across microservices.
- Implemented frontend testing using **Jasmine and Karma**, validating Angular components, services, reactive forms, and route guards to ensure stable user interactions.
- Integrated structured logging using **Log4j**, enabling traceability and simplifying troubleshooting during operational support activities.
- Monitored application health and performance using **Azure Monitor and Application Insights**, proactively identifying bottlenecks, tracking service metrics, and improving system reliability.
- Collaborated within **Agile/Scrum teams**, participating in sprint planning, backlog refinement, code reviews, and iterative delivery cycles to continuously enhance manufacturing and retail systems.

Tech Stack :

Angular (Modules, Components, Services, RxJS, Angular Router), TypeScript | Java 8, Java 11 | Spring Framework, Spring Boot, Spring MVC, Spring Security (OAuth2, RBAC), Spring Data JPA (Hibernate), Spring AOP | Microservices Architecture, RESTful APIs | PostgreSQL (Azure Database), Azure Cosmos DB | Azure Synapse Analytics (Data Warehouse) | Microsoft Azure (Virtual Machines, App Service, AKS, Azure DevOps, Azure Monitor, Application Insights) | Docker | Maven | Git (Azure Repos) | JUnit 5, Mockito, Spring Boot Test, TestContainers | Jasmine, Karma | Log4j | Agile, Scrum

Apollo Health and Lifestyle Limited:

Senior Engineer

Mar 2017 – Jun 2020

Project Description:

Organized operational activities by structuring how intake tasks, scheduling steps, and information updates were handled across business applications. Reduced inconsistencies affecting day-to-day execution. Coordinated implementation efforts across multiple functional groups. Maintained dependable results through regular verification, issue correction, and incremental refinements supporting continuity, accuracy, and operational stability.

Roles and Responsibilities:

- Designed and enhanced healthcare application modules supporting patient intake, appointment scheduling, and clinical data management, ensuring reliable execution of operational workflows across multiple hospital and lifestyle service platforms.
- Developed structured user-facing interfaces using **Angular**, enabling consistent UI components that supported administrative and operational healthcare workflows across internal business applications.
- Implemented client-side logic using **TypeScript** and **JavaScript (ES6)**, improving frontend maintainability, robustness, and dynamic behavior across evolving healthcare use cases.
- Managed reactive frontend data flows using **RxJS**, ensuring consistent handling of asynchronous events and state updates across patient intake and scheduling workflows.
- Built backend services using **Java 8**, supporting stable execution of healthcare business logic across patient management, scheduling, and operational systems.
- Implemented backend modularity using the **Spring Framework**, enabling separation of concerns and maintainable service composition across healthcare platforms.
- Developed RESTful backend services using **Spring MVC**, enabling structured request handling and consistent API behavior for internal healthcare applications.
- Secured backend endpoints using **Spring Security**, enforcing authentication and authorization controls aligned with healthcare data access and privacy policies.

- Designed backend systems using **Monolithic Architecture**, appropriate for controlled-scale healthcare environments requiring simplified deployment and operational stability.
- Documented and standardized APIs using **Swagger**, enabling clear service contracts and simplified integration between internal healthcare systems.
- Utilized **MySQL** as the primary transactional database, supporting consistent storage and retrieval of patient, appointment, and operational healthcare data.
- Implemented persistence mapping using **Hibernate** and **Spring JDBC**, enabling reliable object-relational mapping and optimized database interactions for performance-sensitive operations.
- Deployed applications on on-premises **Linux** servers, supporting controlled hosting environments commonly used within healthcare infrastructure during the period.
- Developed backend unit and integration tests using **JUnit** and **Spring Test**, validating business logic and verifying service interactions across healthcare workflows.
- Applied **Agile** practices and collaborated with QA, operations, and functional teams to deliver iterative enhancements, resolve defects, and ensure continuity of healthcare operations.

Tech Stack :

Angular, TypeScript, JavaScript (ES6), RxJS, Java 8, Spring Framework, Spring MVC, Spring Security, Monolithic Architecture, RESTful APIs, Swagger, MySQL, Hibernate, Spring JDBC, Linux, Shell Scripting, Maven, Git, JUnit, Spring Test, Log4j, Agile, Confluence

ValueLabs:

Associate Software Engineer

Jan 2016 – Mar 2017

Project Description:

Delivered assigned application components within client engagements by following predefined requirements and structured delivery workflows. Implemented functional changes and verified outcomes against expected behavior. Engaged in review and correction activities. Ensured consistent task completion through basic checks, defect resolution, and disciplined adherence to project processes.

Roles & Responsibilities:

- Implemented assigned frontend components using **AngularJS** and **JavaScript**, following predefined UI specifications and senior developer guidance.
- Assisted backend feature development using **Java 7**, contributing to basic business logic implementation under structured supervision.
- Supported backend application structure using the **Spring Framework**, learning standardized layering and component organization practices.
- Implemented basic **REST endpoints** using **Spring MVC**, enabling simple data exchange between frontend and backend components.
- Utilized **MySQL** for transactional data storage and retrieval, executing basic queries to support application functionality.
- Assisted with object-relational mapping using **Hibernate**, learning entity configuration and persistence behavior.
- Managed application builds using **Maven**, ensuring consistent dependency resolution and successful local builds.
- Used **Git** for source code version control, participating in commits, updates, and collaborative development workflows.
- Developed basic unit tests using **JUnit**, validating functionality of small code units and changes.
- Implemented application logging using **Log4j**, supporting debugging, issue tracking, and defect resolution activities.

Tech Stack :

AngularJS, JavaScript, Java 7, Spring Framework, Spring MVC, REST APIs, MySQL, Hibernate, Maven, Git, JUnit, Log4j, Agile

EDUCATION

Master of Science - Computer Science , University of Central Missouri.

Bachelor's - Information Technology, NRI Institute of technology
